## Playback Engine

Scala Enterprise Player allows you to play back your digital content as scheduled from Content Manager.

Scala Player software delivers stable and reliable 24/7 playback even if your network connection goes down. By sending content directly to media players using store-and-forward technology means never having to worry about blank screens. As part of the digital signage management system, Scala Player also keeps a log of events for simplified ad billing and error tracking and has the ability to update on-air without interruption. Utilize real-time data insertion for news, weather and updates to keep your content current.

This aspect of the content manager is compatible with both Linux and Windows. Scala Player also delivers smooth sub-pixel movement and does not download the files as a whole. Saving only the changes that were made, the software mitigates choppiness and eliminates unnecessary content. This seamless interface can also play back interactive videos on a touchscreen monitor for ease-of-use.

Scala combines decades of digital signage knowledge and experience with modern technology to provide players designed for performance and stability. Each Scala Media Player comes with relevant Scala and third-party software installed. Scala Media Players work in conjunction with Scala Content Manager and Scala Designer to create a suite of products for your digital signage needs.
