

Linux ARM Commands

- [Basic Commands](#)
- [Setup Commands](#)

The use of brackets ([]) in a command signify that the information inside the brackets should be replaced with your input and the brackets removed. E.g. [port number] means that you should identify the port number. In this case it could be 8080.

Basic Commands

The following table lists basic commands for the Linux Playback Engine.

Command	Description
<code>sudo ufw status</code>	Use to see the ports defined for remote access on your Linux device.
<code>sudo ufw allow [port number]</code>	Use to add a port number for remote access to your Linux device.
<code>ip addr</code>	Use to view the IP address for your Linux device.
<code>sudo reboot</code>	Use to reboot the player from the command line.

Setup Commands

Use the following commands for command line setup of the Linux Player.

Command	Description
<code>passwd</code>	Use to change the current logged in user password.
<code>sudo [username]</code> <code>sudo passwd [account name]</code>	Use to change the password of another account on the same device.
<code>sudo vncpasswd /etc/vncpasswd</code>	Use to change the TigerVNC password.
<code>sudo nano /etc/hostname</code>	Use to change the name of the player.
